How to Enable Media Autoplay for Arctic Wolf MA Sessions in Safari (macOS)

Andrew Storrs - 2026-11-07 - Internet

Overview:
Some Arctic Wolf Managed Security Awareness (MA) sessions require Safari to allow media to autoplay. By default, Safari blocks autoplay for many sites. Follow the steps below to enable autoplay for MA session sites.

Step-by-Step Instructions

1. **Open Safari** on your Mac.
2. **Go to the Arctic Wolf MA session site.**
   - Example: `https://arcticwolfawareness.com`
   - Or open any link provided by your IT team for security training.
3. **Access Site Settings:**
   - While on the site, click **Safari** in the menu bar.
   - Select **Settings for This Website...**
4. **Enable Media Autoplay:**
   - Find the **Auto-Play** dropdown.
   - Change from **Stop Media with Sound** (default) to **Allow All Auto-Play**.
5. **Repeat for each required site:**
   - If your training uses additional domains, repeat the above steps for each (e.g., `arcticwolf.com`, `microsoftstream.com`, etc.).

Tip:
To enable autoplay for all websites:

- Go to **Safari > Settings (or Preferences) > Websites > Auto-Play**.
- At the bottom, set “When visiting other websites” to **Allow All Auto-Play**.

FAQs

Q: Can IT configure this for me automatically?
A: No, Apple does not permit MDM or automated settings for site-specific autoplay in Safari. This must be done by each user.

Q: What happens if I forget?
A: If media won’t play automatically during a session, repeat the steps above to allow autoplay for the training site.
